invlogis

OPERATING PLATFORM · VIETNAMESE LOGISTICS

Open a new way to operate.

Invlogis reads Vietnamese shipping documents straight into the shipment file, so you re-type less and your data carries on from port and yard to receivables.

Sample data

THE PROBLEM

- Miss a port deadline and fees follow: demurrage (DEM) when import containers sit past the free period, detention (DET) when the empty comes back late.
- EIRs, handover records and weigh slips arrive late, so closing the order and costing run late too.
- One shipment's data sits with many people in many files; jobs go out over Zalo and are hard to trace.

AI THAT READS VIETNAMESE DOCUMENTS

Photograph or upload a document. Invlogis reads the key fields into the shipment file; you review and approve before it is saved.

`[Booking Note]` `[eDO]` `[EIR]` `[weighbridge ticket]` `[QR customs declaration]`

MODULES, ONE SET OF DATA

Dispatch
From customer documents to a completed transport order.

Workshop
Repairs, spare-parts stock, purchasing.

Receivables, payments, invoices
Costs and revenue land on the right shipment.

Vehicles
Vehicle records, handover, return.

Field app
Take jobs, photograph documents; works offline.

Set up per customer
Parameters, lists, on/off packages; no code changes.

HOW IT WORKS

01
Documents come in
Booking Note, eDO, EIR, weighbridge ticket, declaration.

02
AI reads, you approve
Key fields land in the shipment file.

03
Data carries on
Dispatch, transport order, costs, receivables.

BUILT FOR VIETNAMESE PORTS

ePort ports
Keep the ePort task list and its results in the shipment file.

Storage and empty-return limits
See DEM and DET limits coming, so fees are avoided.

6 process templates
FCL, LCL/CFS, air × export, import; a shared catalogue of Vietnamese ports and yards.

> The platform already runs at a container trucking company handling around 110,000 shipments a year.
